

Items for Purchase

CompactFlash Cards

One card should have been supplied with your purchased scanner. Depending on how large the card is, you may/may not need to purchase a slightly larger card to store all of your images. Here are some examples of card sizes and the # of animals it will hold.

- 64 MB – Stores ~1,400 records (700 animals) - recommended
- 512 MB – Stores ~14,000 records (7000 animals)

The card **MUST** be the CompactFlash type and can be purchased at any retail store (Wal-Mart, Staples, Best Buy, etc.)

Card Readers (required)

Unless, you already have one, a card reader is needed for your CompactFlash card. Be sure that the reader supports the “CF I/II” formats

Wal-Mart has one that’s only \$14.84

Machine Strap Holders (highly recommended)

There are binocular straps that are available that can be used to hold your machine to prevent it from dropping on the ground. These work really well and are definitely worth the money. Some that are available:

- Cabela’s - \$20
- Wal-Mart - \$25
