

These are hay prices paid at auction in the recent past weeks. Much of the price information is obtained from USDA Hay Market News. Personal contacts of local Iowa hay auctions secured price information for these market outlets. Auctions were chosen to reflect prices across Iowa. Other nearby auctions may exist. No endorsement of the listed auctions is intended.

The USDA Market News group uses the following hay classification designations in their market price reports. Of all hay sold, 1% or less would be designated in the supreme class. There is a general relationship between visual characteristics and forage analyses. If possible, the following Hay test analyses ranges (on dry matter basis) should be used to establish the appropriate quality designation. When feeding livestock, sample all forage lots and use forage analysis information for balancing livestock rations.

**Internet-based Hay Source possibilities:**

The **USDA Farm Service Agency (FSA)**, responded to drought-induced hay and pasture deficit conditions by its establishing a www website - **Hay Net** - for producers to list information concerning the need for hay or the availability of hay. The WWW link to this site is listed below.

Using the USDA Hay Net page is not as user-friendly as the earlier version. If you want to see the listings 'for sale', In the center-right 'box' on the page, select the line 'Access eHayNet Service'. That will take you to the 2nd page where you must choose either: NEED (hay ads) or HAVE (hay ads). Then a 'state' (the state where the hay is listed,). The 'Select' button will then take you to the listings for that state. Contacts and a limited description of hay available or needed can be found. As with other 'hay list'-type www sites, price and details about sales transactions must be completed between buyer and seller. Note: Not all lots listed for a state are located in that state, approximately half are from other states and Canada
