Definitions and Notes:

Own children include all never-married children under 18 years who are sons/daughters by birth, stepchildren, or adopted children of householder.

Related children include own children and all other persons under 18 years of age in the household, regardless of marital status, who are related to the householder. Foster children are not included since they are not related to the householder.

Poverty status is determined for all persons except those institutionalized, in military quarters, in college dormitories, and unrelated individuals under 15 years of age. The income cutoffs used to determine poverty status include several thresholds; for families, size is cross-classified by the number of related children under 18 years of age, with everyone in a particular family given the same poverty status. For a two-person family, the poverty threshold averaged \$10,869 in 1999, it was \$13,290 for a three-person family, and \$17,029 for a four-person family.

Economic data (e.g., income and poverty) collected in the decennial censuses are based on the previous calendar year. That is the reason for the 1989 and 1999 headings in Tables 5 and 6.
