

Ethanol Usage Projections & Corn Balance Sheet (mil. bu.)

Updated: 11/10/2009

Year: (production/marketing) ^{1/}

Yield (bu. per acre)

Long-term Historical Yield Probability:

Supplies:

Planted acres (million)
Harvested acres (million)
Production (mil. bu.)
Beginning carryover (mil. bu.)
Total Supply (incl. imports)

Total Usage: (mil. bu.)

Feed & residual
Ethanol
Food, ind. & seed
Exports
Total Usage

Ethanol Usage: ^{3/}

Ethanol usage (bu. corn)
DDGS production (mil. bu. corn equiv.) ^{4/}
Ethanol usage (bu. per acre)
DDGS production (bu. per acre equiv.)
Ethanol usage (% corn production)
DDGS production (corn equiv.% of crop)
Mil. bu. increase in ethanol vs. prev. year

Ending Carryover: (mil. bu.)

Carryover as percent of supply
Carryover, weeks of total use

Prices:

U.S. weighted avg. farm price
Iowa weighted avg. farm price
Counter-cyclical pmt.
Harvest price (central Iowa)
Dec. futures price (harvest avg.)

Other:

Feed use % chg. low-yield years vs. 2007-08
Mil. bu. domestic corn feeding replaced by increased DDGS ^{3/}
Mil. bu. corn exports replaced by increased DDGS
Mil. bu. change in corn feeding vs. prev. year
% change in corn feeding vs. prev. year:

Net change in domestic corn feeding (mil. bu.) vs. prev. yr., incl. DDGS

	Historic				Prelim.	Projected 2009-2010 ^{2/}			Projected 2010-2011		
	2004-05	2005-06	2006-07	2007-08	2008-09	Low	Med.	High	Low	Med. ^{5/}	High
Yield (bu. per acre)	160.4	147.9	149.1	150.7	153.9	160.0	162.9	164.0	150.0	159.0	164.0
									18%	65%	17%
						<i>Med. Yld. = USDA Nov. estimate</i>					
Planted acres (million)	80.9	81.8	78.3	93.5	86.0	86.4	86.4	86.4	88.5	88.5	88.5

By Dr. Robert Wisner, Ag Marketing Resource Center, Iowa State University, 1-515-294-4275, rwwisner@iastate.edu

Notes:

^{1/} Marketing year - starts at Sept. 1 of the production year and ends August 31 of the following year. For example, the 2007 crop is marketed from Sept. 1, 2007 to August 31, 2008.

^{2/} Long-term probabilities reflect historical changes to final crop estimates.

^{3/} DDGS substitution for corn feeding is based on 17 lbs. of DDGS per bushel of corn. Assumed DDGS consumption by species varies by year. Current estimates: of the 81% of production consumed domestically after deducting exports is as follows: 36% fed to dairy, 52% fed to beef, 6% fed to hogs, and 6% fed to poultry. Exports are assumed to account for 19% of production, and to gradually increase the future. Assumed percentage of one pound of corn replaced by each pound of DDGS in rations = 45% for dairy, 100% for beef, 55% for poultry and 85% for hogs.

^{4/} Includes corn equivalent of DDGS exports

^{5/} Medium yield at 159 bushels/acre is 0.6 bu. below 1990-2007 trend yield. 1995-2007 yield trend is modestly higher, with two low years and one very high year tilting the trend line upward (See alternative yield trend chart). Actual yield has been below the 1995-07 trend all but one year (2004 and possibly 2009) since 2002. Actual yield has been below the 1990-2007 trend all except two years since 2004 and may exceed it in 2009.

Key Balance Sheet Assumptions:

1. No changes in Conservation Reserve Program.
2. Crude oil (petroleum) price stays in \$60-\$75/barrel range for the rest of 2008-09, then gradually increases in the next two years.
3. U.S. Ethanol mandates, blending credit, and import tariff are unchanged & enforced, & allowable blend is raised to E-15, effective early in 2010.
4. U.S. & World economies have slow growth through 2010.
5. U.S. dollar gradually weakens to 2012.
6. U.S. biodiesel mandate is implemented for 2010 but not 2009 & excess RINs keep biodiesel use below mandate.

... and justice for all
