

# Elements of Design

The elements of design are **shape/form, texture, color, line, and space.** These are the tools used to design a room or space.

## Shape/Form

**Shape** is two-dimensional and appears flat while **form** is three-dimensional with length, width, and depth. (Square is a shape; box is a form.) **Form** is the structure of an item.

**Words to describe shape include:** square, rectangle, circle, oval, triangle, curved, wavy

**Words to describe form include:** cube, box, ball, cylinder, pyramid, free form, sphere

The chair above shows a number of rectangles with curved corners rather than sharp edges. The overall form of the chair is boxy.

## Texture

**Texture** is the surface quality of an item. It is how something feels when it is touched or looks like it would feel if touched.

**Words to describe texture include:** rough, smooth, soft, prickly, squishy, grainy, hard, soft

The chair above is leather, an example of a commonly used material. Leather looks and feels both soft and smooth, slick, cold or crushed around the buttons. The back is textured by buttons so it may be bumpy and firm while the seat cushion looks softer.

## Color

**Color** is what we see when light is reflected.

**Words to describe color include:** hue, value, intensity

**Hue:** the name of the color (yellow)

**Value:** lightness or darkness (pale yellow versus dark mustard yellow)

**Intensity:** brightness or dullness (soft yellow versus fluorescent yellow)

## Line

**Line** is any mark greater in length than width.

**Words to describe line include:** vertical, horizontal, straight, curved, diagonal, thick, thin, dashed, zigzag, continuous, jagged, smooth

The chair at the right shows straight lines in the legs, seat, and chair back. The straight lines are both horizontal and vertical. There are curved lines in the chair back and between the front legs and diagonal lines between the legs on the sides.

## Space

**Space** is the area between and around objects and the area that the object occupies. In a room you have a defined space so it's important to consider how much of the space each object will use. For this reason, space is an added element in home decor.

**Words to describe space include:** cramped, crowded, open, uncomfortable, comfortable, cozy, noisy, warm, cold

The depth and width of chairs A and B are similar. They occupy the same amount of actual space. However, chair A is light and delicate while chair B is heavier, making the amount of visual space they occupy different.

... and justice for all  
The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Many materials can be made available in alternative formats for ADA clients. To file a complaint of discrimination, write USDA, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964. Issued in furtherance of Cooperative Extension work, Acts of May 8 and June 30, 1914 in cooperation with the U.S. Department of Agriculture. Jack M Payne, director, Cooperative Extension Service, Iowa State University of Science and Technology, Ames, Iowa.

# PULLING IT TOGETHER

## Elements and Principles of Design in Home Improvement

By learning and using the elements and principles of design, you will increase your understanding of how and why some things work together and some simply "don't look right."

The principles of design (**emphasis, balance, proportion, rhythm, and unity**) are how we use the tools (elements) to create the *desired look*.

**Emphasis** draws your attention to a certain part of the room.

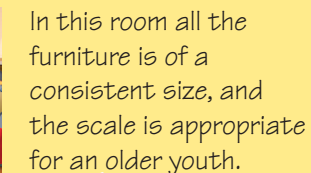

Balance means that both sides appear to be equal even if they are not identical. Formal or symmetrical balance means if you draw a line down the center, both sides are identical. Informal or asymmetrical balance means if you draw a line down the center, both sides appear to be equal in visual weight although not identical.

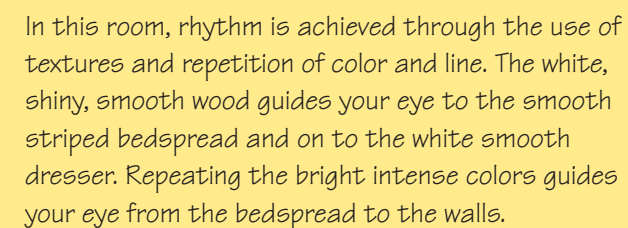

The dressers illustrate formal (or symmetrical) balance and informal (asymmetrical) balance.

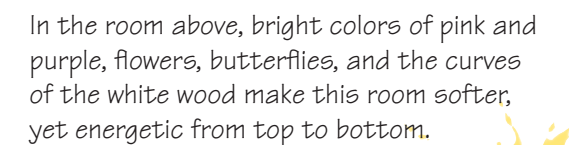

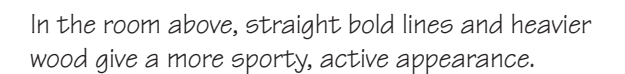

**Proportion** refers to the relationship of parts within an item. **Scale** compares size. Above are two rocking chairs. All the parts (seat, back, legs, and spindles) are in proportion to each other. However, the big chair would not be the correct size or scale for a toddler while the child's rocker would not work very well for an adult to sit in.

**Rhythm** is a feeling of movement as it directs your eye around the room. It is achieved through the repetition of the design elements of shapes, forms, colors, textures, or lines.

Unity is achieved when all the elements and principles work together as a whole to create a look or theme.
