Your family has moved out of town to a house on ten unfenced acres. Now that your family has the space and can afford the purchase price, they decide they are ready to buy a horse. Because of all the reading you did about horses while you still lived downtown, you know that the purchase cost of the horse is not as big as the ongoing cost of care. You decide to help your family understand all of the costs that go along with owning a horse.

Outline what you need to do to your land and what equipment must be purchased before bringing home your horse. Also what expenses will continue through the year and repeat each year?

This horse may be any breed, color, and gender that you would like. You do not have to list dollar amounts of what everything will cost, but be sure to list everything you will need or what has to be done to the horse that will cost money. Write your plans and reasons for them on the answer page. The blank papers may be used to write notes and plan your solution. Each team member is expected to give input.

Solutions will be evaluated on:

- Completeness of response 20
- Application of knowledge 10
- Support of your ideas 10
- Organization 10

Total possible = 50
