# Cash Rental Rates for Iowa <br> 2003 Survey 

The cash rental rates presented in this publication are the result of a survey of farmers, landowners, agricultural lenders, real estate brokers, and professional farm managers. They supplied information based on their best judgments about typical cash rental rates for high, medium, and low quality cropland in their counties, as well as land devoted to hay production, oats, pasture, and cornstalk grazing.
Land suitable for corn and soybeans was divided into high, medium, and low quality thirds, based on its expected corn yield. Estimates of expected corn yields were derived from actual farm yields submitted for crop insurance documentation. The rental rates summarized in this bulletin do not reflect the value of any buildings or storage structures, and assume that half the rent is paid before planting and the remainder following harvest.

The information shown can be useful in comparing rental rates among counties and farms of different levels of productivity. However, actual rental terms for a particular farm should be set by mutual agreement between the owner and tenant, based on the productivity and other characteristics of the land being leased. Extension publication Fm-1801, "Estimating Cash Rental Rates for Farmland," offers guidelines for determining a fair cash rent for a particular farm.

Circumstances such as the following may justify a higher or lower rent in certain cases:

- Small size or unusual shape of fields
- Presence of terraces or creeks that affect the time it takes to plant and harvest
- Difficult or restricted access to fields
- High or low fertility levels or Ph
- Existence of contracts for growing seed or specialty grains
- Above or below average local grain prices due to transportation costs, proximity to barge loading facilities or feed demand
- USDA program variables, such as corn base and assigned yields

Counties were grouped into areas as shown on the map below. Data for some similar counties were combined, when only a small number of responses was received. Rental rates for pasture and hayland are not shown for counties for which only a few responses were received. However, the average pasture and hayland rates reported for each area are shown.
The cooperation and assistance of the landowners, farmers, and agribusiness people who responded to this survey are greatly appreciated.
