

Opportunity Cost

Opportunity cost is a useful concept when considering alternative places for using your resources and assets. In situations where the owner's resources and assets are used in the business, it is the concept used in determining if the business is making a return over and above the cost of contributed resources.

The definition of opportunity cost is the income foregone by not using the resource or asset in its next best alternative. The opportunity cost concept is frequently associated with resources and assets that an individual or business owns. For example, if an individual owns 100 acres of farmland, he/she has the decision of either farming the land or renting it to a neighbor. If he/she farms the land, the opportunity cost is the income foregone by not renting it to a neighbor. If the cash rental rate is \$150 per acre, the opportunity cost (income foregone) by farming the land and not renting it to the neighbor is \$15,000 ($\150×100 acres.) So, unless the individual can generate net returns of more than \$15,000 from farming the land, he/she is financially better off renting the land to the neighbor.

This example can be taken a step further. The land could be sold and the proceeds invested elsewhere. For example, if the farmland can be sold for \$3,000 per acre and the proceeds put in an alternative investment that returns 10 percent, the income foregone (opportunity cost) for either farming the land or renting it to a neighbor is \$30,000 ($\$3,000 \times 100$ acres $\times 10\%$).

If you are contributing your labor to a value-added business, the opportunity cost is the income foregone by not employing the labor elsewhere. For example, if you are working full-time in your own value-added business and the value of your labor is \$40,000 in the job market, the opportunity cost is the \$40,000 foregone by not being employed.

The opportunity cost concept can be looked at in various ways. The opportunity cost of making a decision to invest is the satisfaction given up by not making a consumption decision. For example, the opportunity cost of investing in an ethanol plant may be the satisfaction given up by not buying a new pickup. There is a fine line between investment decisions and consumption decisions in the farm business.

... and justice for all

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Many materials can be made available in alternative formats for ADA clients. To file a complaint of discrimination, write USDA, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964.
