ABCD's of Skin Cancer

DEFINITIONS

PREVENTIONS

SIGNS

ASYMMETRY

COLOR

DIAMETER

ABCD

The ABCD's of skin cancer:

A - Asymmetry: If one side does not look like the other, there may be something wrong.

B - Border: Irregular or ragged borders are more likely to be malignant than smooth borders.

C - Color: Changes or differences in color are another sign.

D - Diameter: If the diameter of a skin lesion is greater than 6 millimetres, there is an increased risk of cancer.

Prevention tips:

- Use sunblock with a high SPF.
- Wear protective clothing and avoid midday sun.
- Avoid tanning beds.
- Regularly check for skin cancer and report any changes to a doctor.
